SUMMARY

Staff Accountant and designated Accounting Automation Lead at a \$200M manufacturer, partnering with IT, BI, and Accounting leadership to scope, build, and deploy production automation tools inside a live 3-5 day month-end close across two legal entities. Computer Science degree; CPA candidate sitting for exams in October 2026. Delivered four production and in-build automations within six months, eliminating roughly 40 hours of manual close work per month, and led an internal workshop teaching the accounting team how to apply Copilot to reconciliation workflows.

EXPERIENCE

Ortho Molecular Products

Barrington, IL

Staff Accountant · Accounting Automation Lead

March 2026 – Present

- Prepare and post journal entries and complete monthly balance sheet reconciliations (cash, fixed assets, accruals) across two legal entities, including full ownership of a subsidiary's books, on a compressed 3-5 day close.
- Designated automation lead by the VP of Accounting: gather requirements directly from accounting, IT, and BI stakeholders, then design, build, and deploy production tooling into the live close process.
- **SAP Concur Expense Review (production):** built a rule engine classifying ~1,900 corporate card transactions per cycle at 95-97% exact match to reviewer with zero misclassifications, cutting a 36-hour monthly manual review to under 10 minutes.
- **Royalty Calculation Pipeline (production):** designed a multi-agent Python system with per-family rate logic and automated validation checks, replacing a manual Excel and pivot table workflow for a critical month-end report.
- **Labor Capitalization Time Tracker (in build):** role-based development-hour tracking for software capitalization under ASC 350-40, with supervisor approval workflow, date-range locking, and full audit trail.
- **Closing Command (in build):** close-coordination tool with dependency tracking and phase classification, replacing the team's Excel and email close checklist.
- Led a live internal workshop on applying Microsoft Copilot to account reconciliations, mapping which steps belong to deterministic tools (XLOOKUP, Power Query) versus AI-assisted exception handling and narrative drafting.
- All automations preserve accountant review and posting authority, emit structured audit logs, and ship with written process documentation built for handoff and training.
