SUMMARY

Staff Accountant at a $200M manufacturer working across technical solutions and financial systems. I own month-end deliverables across two legal entities on a 5-day close and build the production tools behind them, including an OpenAI-API-backed classifier that cut a 12-hour monthly review to 10 minutes. Selected by the VP of Accounting to lead the team's automation work, and brought on as the bridge between Accounting, IT, and Marketing on the company-wide One Website Project. Computer Science degree. CPA candidate sitting January 2027.

EXPERIENCE

Ortho Molecular Products — **Barrington, IL**

Staff Accountant · Technical Solutions & Financial Systems — *March 2026 – Present*

- Prepare and post journal entries and complete monthly balance sheet reconciliations (cash, fixed assets, accruals) and sales tax filings across two legal entities, including full ownership of a subsidiary's books, on a compressed 5-day close.
- **Concur Automation (production LLM system):** built an LLM-assisted classifier in C#/.NET on Azure Functions calling the OpenAI API inside deterministic rule guardrails for ~1,900 corporate card transactions per cycle. 95-97% exact match to human reviewers, zero misclassifications, and a 12-hour monthly review cut to 10 minutes.
- **Royalty Calculation Pipeline (production):** designed and shipped a rule-based C#/.NET system on Azure Functions with per-family rate logic and automated validation checks, replacing a manual Excel and pivot table workflow and cutting the monthly royalty check from ~30 to ~10 minutes.
- **Royalty Report Fix (financial systems):** the SQL-based royalty report used in the Fast Close produced wrong data for months. Wrote the SQL myself to isolate the defect, gave the BI team the exact fix, and followed through four months until the August close ran clean.
- **Accounting Time Tracker (production):** built an Azure Function timekeeping tool with approval workflow and audit trail. Piloted, rebuilt after IT review, now in production.
- **One Website Project (cross-functional):** brought on as the bridge between Accounting, IT, and Marketing for consolidating three practitioner platforms into one. Wrote the workflows document, decisions sheet, and a clickable prototype, and caught a W-9/TIN and verified banking requirement missing from all project documentation.

Athletico Physical Therapy — **Barrington & Lake Zurich, IL**

Physical Therapy Aide — *2020 – 2021; 2024 – 2026*

SELECTED PROJECTS · LIVE DEMOS AT WILLIAMCKIM.COM/DEMOS

- **Construction Forecasting Model:** forecasts U.S. construction spending from public data, with four methods competing in a rolling backtest (about 6.7% average error versus about 10% for "same month last year"), plus a scenario model with a variance bridge and a live-formula Excel export.
- **Post-Quantum Readiness Toolkit (public on GitHub):** flags finance records exposed to harvest-now, decrypt-later risk using Mosca's inequality and real retention rules (SEC, PCAOB, IRS, ERISA, BSA), builds a prioritized migration register, and checks vendor claims with a live TLS handshake, flagging any vendor whose quantum-safe answer doesn't match what its site negotiates.
- **3D Quote Engine and Apartment Walkthrough Studio:** TypeScript and Three.js products: an embeddable contractor configurator with live pricing and PDF quotes, and a first-person apartment walkthrough and design tool. 323 unit tests and 95 browser checks combined.
- **Tour Engine:** guided in-app walkthrough tool with a host adapter and a privacy-safe recorder. Mutation-tested: 111 of 111 injected defects caught.

EDUCATION

University of Pittsburgh — **Pittsburgh, PA**

Bachelor of Science in Computer Science — *2024*

Credentials: CPA Candidate, Illinois (sitting January 2027) · AWS Cloud Solutions Architecture · IBM Applied AI Developer · Generative AI for Cybersecurity

SKILLS

Delivery & Enablement: Requirements Gathering · Specification Documentation · Cross-Functional Collaboration · Prototyping

AI & Automation: Building with the OpenAI (GPT), Claude, and Gemini APIs (production and personal projects) · Claude Code · Microsoft Copilot · Prompt Engineering · Evaluation Against Human Baselines

Technical: C# / .NET · Azure Functions · Python · SQL · JavaScript / TypeScript · Three.js · Java · C++ · Excel (VBA, Power Query) · Power BI · Dynamics 365 · SAP Concur · Git / Azure DevOps

Accounting: Journal Entries · Reconciliations · Month-End Close · Fixed Assets · Sales Tax · Multi-Entity · Internal Controls

INTERESTS & ACTIVITIES

NAIGC Nationals #2 Rings (2025), #4 Pommel Horse (2023); former collegiate gymnast, now HYROX.
