SUMMARY

Staff Accountant at a \$200M manufacturer working across technical solutions and financial systems: partnering with IT, BI, and Accounting leadership to scope, build, and deploy production automation inside a live 5-day month-end close across two legal entities, including an OpenAI-API-backed classification system. Selected from Accounting as the cross-functional bridge between IT, Accounting, and Marketing on the company's practitioner website consolidation project. Computer Science degree; CPA candidate sitting for exams in October 2026. Automation delivered in the first six months eliminates roughly 40 hours of manual close work per month.

EXPERIENCE

Ortho Molecular Products

Staff Accountant · Technical Solutions & Financial Systems

Barrington, IL

March 2026 – Present

- Prepare and post journal entries and complete monthly balance sheet reconciliations (cash, fixed assets, accruals) and sales tax filings across two legal entities, including full ownership of a subsidiary's books, on a compressed 5-day close.
- Selected by the VP of Accounting to lead the team's automation initiatives: gather requirements directly from accounting, IT, and BI stakeholders, then design, build, and deploy production tooling into the live close process; every system preserves accountant review authority, emits audit logs, and ships with written procedures.
- **Concur Automation (production LLM system):** built an LLM-assisted classification engine in C#/.NET on Azure Functions, calling the OpenAI API with deterministic rule guardrails, processing ~1,900 corporate card transactions per cycle; evaluated against human reviewers at 95-97% exact match with zero misclassifications, cutting a 36-hour monthly review to under 10 minutes while preserving human posting authority.
- **Royalty Calculation Pipeline (production):** designed and shipped a rule-based C#/.NET system on Azure Functions with per-family rate logic and automated validation checks, replacing a manual Excel and pivot table workflow and cutting the monthly royalty check from ~30 to ~10 minutes.
- **Fast Close Report Fix (financial systems):** the SQL-based Fast Close report had produced wrong data for months; wrote and ran the SQL myself to isolate the defect, identified the exact code location, and delivered the fix to the BI team, following through over four months until the August close ran fully accurate with no discrepancies.
- **Accounting Time Tracker (production):** designed and built a timekeeping tool for the accounting building as an Azure Function, capturing hours across roles and activities with approval workflow and full audit trail; piloted with the department, rebuilt to incorporate IT review, and now in production.
- **Practitioner Website Consolidation (cross-functional):** author the specification layer between Marketing's requirements and IT's build for the consolidation of three practitioner platforms into one account and website: a versioned workflows document, a scope and decisions sheet, a plain-language stakeholder version, and a clickable HTML prototype used to align the team; surfaced a tax compliance requirement missing from all project documentation (W-9/TIN and verified banking before proceeds accrue, preventing 1099 gaps and backup withholding exposure) and drove it into the ERP field design.

Athletico Physical Therapy
